

Word Prediction as an accommodation on the SBAC (2017-2018)

Chromebook: There is currently no option for providing word prediction on the SBAC while using a Chromebook. The Chromebook must be put in Kiosk mode during the SBAC. No extensions are available in Kiosk mode. *AIR secure browser is working with Google to see if this can be resolved. A solution will not be available for testing in 2017-2018.

iPad: There is currently no option for providing word prediction on the SBAC while using an iPad. The iPad is placed in Guided Access mode during the SBAC testing. No additional apps are available for use while in Guided Access mode.

Window/Mac: Third party word prediction software options can be used in conjunction with the SBAC in the secure browser when the test is in PERMISSIVE MODE. There are specific steps to follow to utilize third party word prediction software. See the summary below for compatible options.

Summary of SBAC compatibility with 3rd party word prediction software options

Product	Device	Word Prediction
Co:Writer Universal extension	Chromebook (Chromebrowser)	X
